11201 Renner Boulevard
Lenexa, Kansas 66219

FEB 7 2014

Mr. Bill Black, Superintendent
Ozark National Scenic Riverways
P.O. Box 490
Van Buren, MO 63965

Dear Mr. Black:

RE: Review of Draft Environmental Impact Statement/General Management Plan for Ozark National Scenic Riverways, Missouri

The U.S. Environmental Protection Agency has reviewed the Draft Environmental Impact Statement/General Management Plan for Ozark National Scenic Riverways. Our review is provided pursuant to the National Environmental Policy Act 42 U.S.C. 4231, Council on Environmental Quality regulations 40 C.F.R. Parts 1500-1508, and Section 309 of the Clean Air Act. The DEIS was assigned the Council on Environmental Quality number 20130325.

Based on our overall review and the level of our comments, the EPA has rated the DEIS for this project LO (Lack of Objections). A copy of EPA's rating descriptions is provided as an enclosure to this letter.

The DEIS adequately outlines the purpose, need, and general management plan for this project. The preferred Alternative (B) seems to address and provide a good balance of the various uses and resources of ONSR. We commend your coordination efforts with various other agencies and entities throughout the development of this project. We would encourage continued coordination with local, state, and federal agencies to ensure that all laws, ordinances, and regulations are followed and all necessary permits acquired. We also would like to thank you for prominently addressing the direct, indirect, and cumulative effects of each potential environmental consequence.

Though environmental impacts included in the DEIS were overall minimal, EPA offers the following comments for additional considerations of potential environmental impacts and a focus on minimization and mitigation of these impacts and provide additional information related to the project.

While it is understood that the proposed management process would allow for site-dependent flexibility in management and mitigation practices, it would be useful in instances such as these to include at least a few specific examples of practices and procedures that may be used to meet these directives and how health and condition will be measured. EPA continues to support avoiding and minimizing adverse impacts to air, land, and water quality, including wildlife and their habitat. We would like to suggest that any potential effects or disturbance of fish and wildlife species be minimized to the extent possible through the use of BMPs for such activity.

In the event that there are jurisdictional wetlands impacted by the proposed action, we recommend that any mitigation should occur in the same HUC 8 or smaller watershed as the location of the project impacts. If changes occur in the project purpose, need, alternatives, or impacts between now and the

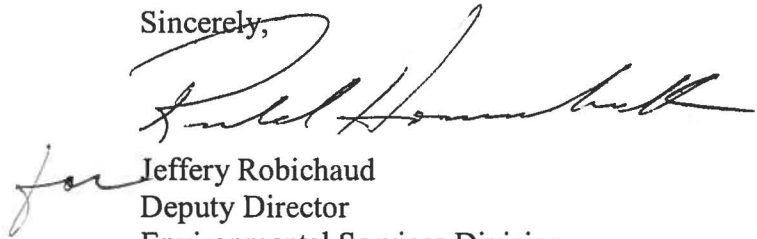

Printed on Recycled Paper

time of issuance of Public Notice, EPA's 404 program reserves the ability to comment further on this project. Information may be generated through the 404 public interest review process that was not documented during the EIS process and should be considered in the final decision. This could include changes in regulation or processes, advances in the knowledge of the resources to be impacted, discovery of populations of threatened or endangered species, new best management practices, and/or improvement in stream or wetland restoration science.

Thank you for the opportunity to provide our comments regarding this project. If you have any questions, please contact Amber Tucker, NEPA Reviewer, at 913-551-7565 or via email at tucker.amber@epa.gov.

Sincerely,

A handwritten signature in black ink, appearing to read "Jeffery Robichaud", is written over the typed name.

Jeffery Robichaud
Deputy Director
Environmental Services Division

Draft Environmental Impact Statement Rating Definitions

Environmental Impact of the Action

"LO" (Lack of Objections)

The EPA review has not identified any potential environmental impacts requiring substantive changes to the proposal. The review may have opportunities for application of mitigation measures that could be accomplished with no more than minor changes to the proposal.

"EC" (Environmental Concerns)

The EPA review has identified environmental impacts that should be avoided in order to fully protect the environment. Corrective measures require changes to the preferred alternative or application of mitigation measures that can reduce the environmental impact. EPA would like to work with the lead agency to reduce these impacts.

"EO" (Environmental Objections)

The EPA review has identified significant environmental impacts that must be avoided in order to provide adequate protection for the environment. Corrective measures may require substantial changes to the preferred alternative or consideration of some other project alternative (including the no action alternative or a new alternative). EPA intends to work with the lead agency to reduce these impacts.

"EU" (Environmentally Unsatisfactory)

The EPA review has identified adverse environmental impacts that are of sufficient magnitude that they are unsatisfactory from the standpoint of public health or welfare or environmental quality. EPA intends to work with the lead agency to reduce these impacts. If the potentially unsatisfactory impacts are not corrected at the final EIS stage, this proposal will be recommended for referral to the CEQ.

Adequacy of the Impact Statement

"Category 1" (Adequate)

EPA believes the draft EIS adequately sets forth the environmental impact(s) of the preferred alternative and those of the alternatives reasonably available to the project or action. No further analysis or data collection is necessary, but the reviewer may suggest the addition of clarifying language or information.

"Category 2" (Insufficient Information)

The draft EIS does not contain sufficient information for EPA to fully assess environmental impacts that should be avoided in order to fully protect the environment, or the EPA reviewer has identified new reasonably available alternatives that are within the spectrum of alternatives analyzed in the draft EIS, which could reduce the environmental impacts of the action. The identified additional information, data, analyses, or discussion should be included in the final EIS.

"Category 3" (Inadequate)

EPA does not believe that the draft EIS adequately assesses potentially significant environmental impacts of the action, or the EPA reviewer has identified new, reasonably available alternatives that are outside of the spectrum of alternatives analyzed in the draft EIS, which should be analyzed in order to reduce the potentially significant environmental impacts. EPA believes that the identified additional information, data, analyses, or discussions are of such a magnitude that they should have full public review at a draft stage. EPA does not believe that the draft EIS is adequate for the purposes of the NEPA and/or Section 309 review, and thus should be formally revised and made available for public comment in a supplemental or revised draft EIS. On the basis of the potential significant impacts involved, this proposal could be a candidate for referral to the CEQ.
